G/flex

Introducing G/flex 650 and 655

A revolutionary new adhesive from WEST SYSTEM products.

650 is a toughened, versatile, liquid epoxy for permanent waterproof bonding of fibreglass, ceramics, metals, plastics, damp and difficult-to-bond wood. With a modulus of elasticity in excess of 1GPa, it is more flexible than standard epoxies, but much stiffer than adhesive sealants.

Ideal for bonding dissimilar materials G/flex may be modified using WEST SYSTEM fillers and additives, and used to wet-out fibreglass tapes and fabrics. Mixed at a 1:1 ratio, G/flex has approximately 45 minutes of working time at 22°C, it will become solid in 3-4 hours and achieve a workable cure in 7-10 hours.

G/flex 655 a thickened 1:1 epoxy.

Formulated to create structural bonds which absorb the stresses of expansion, shock and vibration. It will glue a wide range of dissimilar materials, resinous woods and exotic woods. It is very effective in the repair of aluminum, plastic and wooden boats, kayaks and canoes.

Now available throughout Europe and beyond.

Six10™

Introducing Six10 Epoxy adhesive

Measuring and working with epoxy has now become easy. The new Six10 thickened epoxy adhesive meters the correct ratio of epoxy resin and hardener from a multi chambered tube that fits in any standard caulking gun.

Six10 adhesive offers permanent, waterproof, gap filling and gluing performance of two part epoxies in this easy to dispense package.

The pre-thickened components pass through a static mixer in which they are fully blended together before being dispensed in a smooth workable bead.

Working time is 45 minutes at 21°C and solid cure in 5-6 hours.

This easy to use high quality epoxy adhesive takes bonding convenience to a new level and should form part of any workman's or yachtsman's toolkit.

Now available throughout Europe and beyond.
